

Mentor Meeting 2026-01-26

Meeting information

- Wednesday January 26, 2026. Ryerson 278
- Han Zhang, David Jacobson, Kiki Mei, Mira Shi, Alejandro Orellana, Yichen Ding

Meeting Notes

- Please write down a complete set of notes for the meeting.
 - In terms of detail and length the expectation is that there should be nearly one page per half hour of meeting. So an hour long meeting would be around two pages.
 - Include a set of action items that came out of the meeting. What specific things need to be done (and by whom)? This should be a separate, identifiable section of the meeting notes.

Candice is showing our last quarter's deliverables to people at the Department of Energy.

Invited us to join the meeting if we are interested in joining.

Candice can ask during this meeting for other comparable cities that they know about who has good data for us to use.

We finished up our usual standup with Mira talking about her work implementing datasets from different cities.

Alejandro also went over his fixed effects models for the standup.

Noted that it would be helpful if he consolidated the information into a slack message for us to process.

Found this article that uses "Not Submitted" in the reporting status to check non-compliance

Updated Candice on the differences in results between our analyses and the Crain's article.

Compliance seems good if we are looking at buildings being in the data.

Discovered that "Not Submitted" in the reporting status usually aligns with the building having null values for their data.

Action Items:

Get some things up on the dashboard.

Go back and address our concurrent buildings definition
