

Mentor Meeting 2026-01-21

Meeting information

- Wednesday January 21, 2026. Ryerson 276A
- Han Zhang, David Jacobson, Kiki Mei, Mira Shi, Alejandro Orellana, Yichen Ding

Meeting Notes

- Please write down a complete set of notes for the meeting.
 - In terms of detail and length the expectation is that there should be nearly one page per half hour of meeting. So an hour long meeting would be around two pages.
 - Include a set of action items that came out of the meeting. What specific things need to be done (and by whom)? This should be a separate, identifiable section of the meeting notes.

Feedback for last quarter's deliverables:

Very interesting and cool dashboard. Should keep developing it.

Candice will check in with groups to look for dashboard feedback. Also general project feedback to potentially guide this quarter's work.

Candice is also looking to meet with the team more regularly, weekly check ins to help keep her updated on what is going on

Standup:

Went around the group and shared standup on work we did the previous week.

Han started and explained cleaning with the Year Built and implementation of the Chicago Energy benchmarking - Covered Building dataset.

Kiki went next showing some of her exploratory analyses focusing on non-compliance patterns Mira then went into the city vs city comparisons. Candice was curious about "Why those cities?"

Mainly found major cities that also have energy initiatives

Alejandro introduced his fixed effects models, seeing impacts of several variables to predict Weather Normalized Site EUI.

Research Direction #1:

Suggest adding Seattle, NYC, and Huston to city by city comparison. Looking at similar size and weather cities that have published data. Also consider finding data from Naperville and Evanston or other nearby cities.

Cities around the great lakes (milwaukee, chicago suburbs, ...)

Research Direction #2:

Can add EUI to the model, since star rating is a stepladder while EUI is continuous.

Research Direction #3:

Focus on policy is a good direction. Would be impactful to understand how policies are.
May focus on specific building types.

Action Items:

Candice will reach out within the Chicago team to get dashboard/project feedback

The team will look into getting data from different cities to compare to Chicago
